

Parents Teach Sex Best Pregnancy and Anatomy

Here are some additional ideas for discussing sex with your family

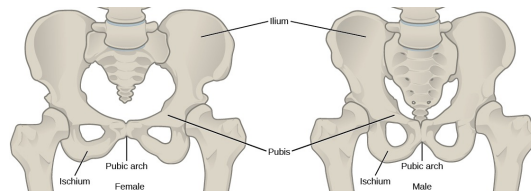

This is what a baby looks like inside it's mother's womb. Notice how the baby is connected by an umbilical cord to the placenta. This is how the baby gets the nourishment they need to grow. How long is a woman pregnant for? Pregnancy lasts 40 weeks, about 9 months, and is divided into three trimesters based on the age of the baby.

How do you think a baby starts out?

This is what a human skeleton looks like. Did you know that scientists can tell the difference between males and females even by their skeleton?

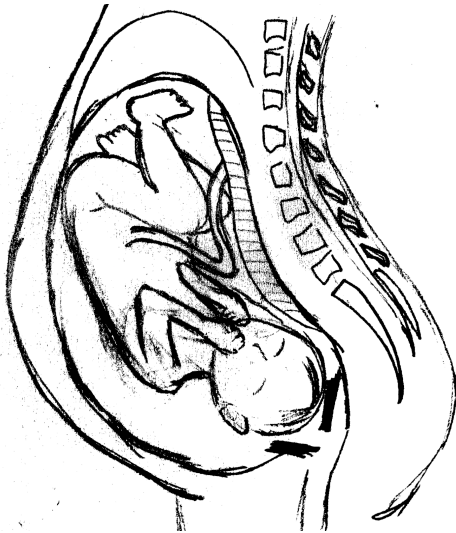

One place where this is especially true is in the pelvis. Take a look at the picture below, can you tell which skeleton pelvis belongs to a male or a female? What reasons can you think of for these differences?

- Did you notice how the male pelvis is narrower?
- Why do you think women would need a wider pelvis?
- How are men and women different physically?

Parents Teach Sex Best Pregnancy and Anatomy

Here are some ways that men and women are similar. Men and women have many of the same organs.

- What organs can you see or think of that men and women both have?
- What are other ways that men and women are similar?
